

Technology drives your business.
Do you know what's driving your technology?

Device42 ensures you understand:

- **What assets are in use**
- **Where they are located**
- **How they depend on each other**

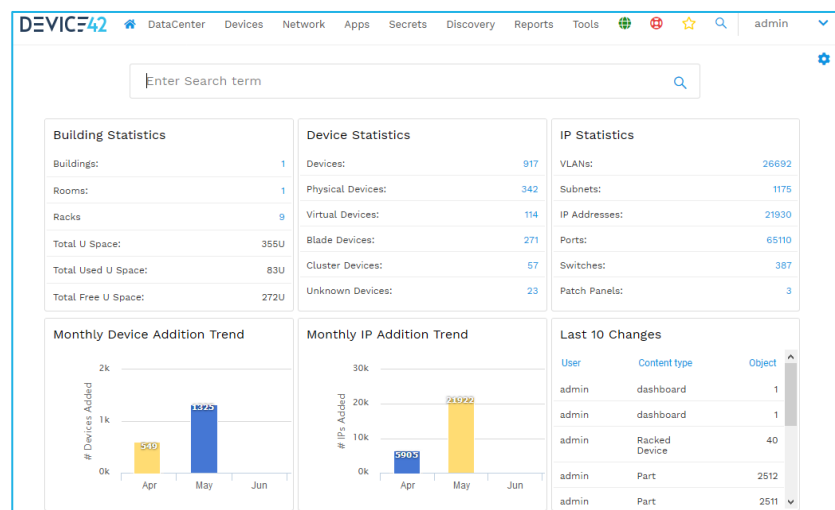

...along with a host of other important information!

Comprehensive Discovery	IT Inventory & Asset Management	Data Center Infrastructure Management	IP Address Management
Automated discovery maps your entire IT infrastructure, including buildings, rooms, racks, devices (physical & virtual) and other IT assets.	Powerful data center inventory management tracks the entire lifecycle of assets.	Accurately model the physical datacenter including buildings, rooms, and racks, plus create reports & leverage powerful visualizations.	Easily track and provision IP addresses, VLANs, subnets, and MAC addresses.
Warranty & Service Contract Management	Cable Management	Password / Secret Management	Integrations, RESTful APIs & Webhooks
Discover, track, and manage warranty & service contract lifecycles. Warranty expiration dates and other details can be pulled automatically from Dell, HP, Lenovo, and IBM, automatically!	Track, manage, and visualize patch panel and switch port connections for the timely and accurate resolution of support issues.	Track and manage passwords in a centralized, encrypted "vault".	Device42 integrates out-of-the-box with your favorite IT software; RESTful APIs & webhooks simplify custom integrations.

Device42 Empowers IT Staff:

- ✔ Discover what you have, where it is, and know who owns it.
- ✔ Improve infrastructure service delivery with actionable insights.
- ✔ Reduce audit time and effort dramatically.

DEVICE42 MAKES GOOD BUSINESS SENSE

In addition to powerful discovery and data center management capabilities, Device42 also delivers business benefits that make Device42 the smart choice:

- ✓ Discover what you have, where it is, and know who owns it.
- ✓ Understand device, service, and user dependencies.
- ✓ Manage complete asset life cycles.
- ✓ Improve infrastructure service delivery with actionable insights.
- ✓ Dramatically reduce audit time and effort.

- ✓ Rapid implementation
- ✓ No added service and support costs required
- ✓ Highly scalable - from hundreds to millions of devices
- ✓ Easily integrate with existing IT tools using RESTful API's and app connectors
- ✓ Free trial - test drive Device42 in your environment - device42.com/download/

ABOUT DEVICE42

Founded in 2012, Device42 software automatically discovers and maps IT infrastructure, including detailed application dependencies - offering comprehensive insight into any computing environment.

Device42 helps companies in more than 60 countries around the globe identify, visualize, and manage devices, network components, software, services, supporting infrastructure, and more.

With a familiar, convenient web-based interface, Device42 helps data center managers understand network interdependencies, improve network security, plan and execute migrations, and mitigate the impacts of planned and unplanned IT network changes

Need to go beyond Core capabilities?

In addition to Core, Device42 offers a selection of tiered add-on modules, each of which adds a new level of functionality that builds upon the one before it.

As needs change or when new functionality is required, simply add a new module to enable more advanced Device42 features:

- Enterprise Application Mapping
- Software License Management (SLM)
- Software Vulnerability Management (requires SLM)
- Resource Utilization
- Power and Environmental Monitoring
- Netflow add-on for App Mapping

Experience Device42 for Yourself!

See why hundreds of companies in more than 60 countries around the globe are using Device42 to manage their data center infrastructure:
