## CORPORATE OVERVIEW

# DEVICE42 SOFTWARE: TOWARDS A UNIFIED VIEW OF IT INFRASTRUCTURE

Now more than ever, businesses around the globe realize that the complexity and importance of managing their data center is increasing exponentially. With this comes the challenge of knowing what assets are in use, where they are located, what dependencies exist between them, along with a host of other information and capabilities.

Keeping accurate, up-to-date device, and application records is nearly impossible using spreadsheets and static relationship diagrams. In addition, managing data center operations using multiple disparate tools also reduces operational efficiencies while adding complexity to managing the data center. Add the costs for acquiring and supporting disparate tools to these issues – and the need for a better data center management solution is apparent.

That's why we created Device42, data center infrastructure management software.

Device42 was created by people experienced with managing complex data centers, people who understand the need for a comprehensive, centralized, and cost-effective solution that makes managing the data center faster, easier, and accurate.

## COMPREHENSIVE DATA CENTER MANAGEMENT CAPABILITIES IN A SINGLE UNIFIED SOLUTION

With Device42, organizations of all sizes can easily and effectively manage their complex IT infrastructures using comprehensive, highly automated data center management capabilities:

### IT Asset Management

Comprehensive auto-discovery to locate, map, visualize, track and manage: buildings, rooms, racks, devices (physical and virtual), and other IT assets.

### Application Dependency Mapping

Understand and view dependencies between devices, applications, and services, and the impacts of planned and unplanned outages for the re-architecture of systems, applications, and departments.

### IP Address Management

Easily track and provision IP addresses, VLANs, subnets, and MAC addresses.

### Affinity Groups

Automated move groups show you exactly what applications and services you can safely move together.

### Cloud Recommendation Engine

Get exactly the details you need to plan your next cloud migration based on auto-discovered inventory details, including instance sizing suggestions and actual costs on AWS and Azure.

### Software License Management

Create and maintain a comprehensive, accurate profile of the software deployed on Windows and Linux machines across the entire IT infrastructure.

### Power and Environmental Management

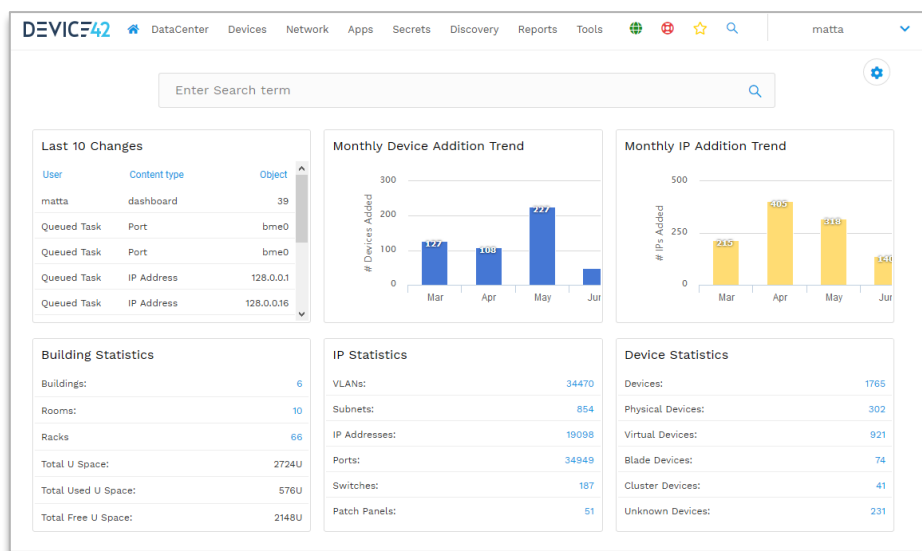

Centrally monitor power, temperature, humidity, pressure, dew point sensors and control devices on PDUs/CRACs.

### Password Management

Track and manage enterprise-wide network passwords in a centralized, highly secure password "vault".

### Cable Management

Track, manage, and visualize patch panel and switch port connections for the timely and accurate resolution of support issues.

# BETTER DATA CENTER MANAGEMENT, POWERED BY EXCEPTIONAL DATA CENTER MANAGEMENT SOFTWARE

Now more than ever, businesses around the globe realize that the complexity and importance of managing their data center is increasing exponentially. With that comes the challenge of knowing what assets are in use, where they are located, what dependencies exist between them, along with a host of other information and capabilities.

- Discover what you have, track where it is, and know who owns it
- Improve planning with financial data for budgeting
- Dramatically reduce auditing time and effort
- Identify which racks have capacity for new devices

- Understand device, service, and user dependencies
- Improve infrastructure service delivery with accurate data and actionable information
- Optimize improve staff productivity and focus on high-value business initiatives
- Monitor and manage software licenses and ensure compliance
- Manage the entire lifecycle of your data center assets
- Manage and track password views, expiration dates, and change histories

## DEVICE42 MAKES GOOD BUSINESS SENSE

In addition to its comprehensive and powerful data center management capabilities, Device42 also delivers business benefits that make Device42 the smart choice:

- Rapid implementation for quick solution deployment
- No added service and support costs required
- Leverage existing IT infrastructure using RESTful API's and app connectors
- Highly scalable - from hundreds to millions of devices
- 24/7/365 online support portal
- Full-feature free trial - experience the benefits for yourself before buying!

See why hundreds of companies in more than 35 countries around the globe are using Device42 to manage their data center infrastructure:

## ABOUT DEVICE42

Device 42 Inc., a leader in Data Center Infrastructure Management (DCIM), delivers comprehensive, low-cost, high-value solutions that enable organizations around the globe to quickly, easily, and effectively manage their complex IT infrastructures. Device42 software centralizes data center management making IT assets visible, understandable, and controllable.

Companies around the globe use Device42 to identify, visualize, and manage devices (whether physical, virtual, or cloud), networks components, software, services, supporting infrastructure, and more. With a familiar, convenient web-based interface, Device42 helps data center managers understand network interdependencies, improve network security, plan and execute migrations, and mitigate the impacts of planned and unplanned IT network changes.

Device42 is delivered as a virtual appliance, is easily installed, and provides comprehensive features including auto-discovery via RESTful APIs for rapid data input and reliable results.
